

Sc7 NEW GENERATION

NEW GENERATION

The new Sc7 New Generation coach is the perfect symbol of modernization, technology, progress, and the future of transportation. Its elegant design, innovative features, and commitment to sustainability make it the ideal choice for travelers and transport operators.

Sc7 NG offers a lower fuel consumption, which leads to significant savings in operation costs.

Welcome to the future of passenger transportation

Sc7 NG

The new vehicle represents a leap into the future in terms of modernization, technology, and advancement in the transportation sector.

With its avant-garde and elegant design, the Sc7 coach becomes the symbol of evolution in passenger transportation. Every detail has been carefully designed to offer an exceptional travel experience for both passengers and operators.

Furthermore, the Sc7 has been designed to be environmentally friendly, thanks to the use of chassis with the latest engines and the implementation of energy-efficient technologies. This guarantees lower fuel consumption and a significant reduction in emissions, contributing to a more sustainable future.

Unique design

It combines avant-garde design, robustness, and safety. It enhances the exquisite value of the lines and its flow throughout the vehicle.

The new front represents its innovative design, adding modern lines to create a highly harmonious ensemble.

Improved Accessibility

The new exterior design of the Sc7 NG optimizes spaces and achieves a more spacious access area..

Better Access

The new exterior design of the Sc7 NG optimizes spaces and achieves a more spacious access area.

This amplitude improves the accessibility of passengers and guide. The design maximizes the vehicle's capacity while maintaining the brand's and product's identity in terms of structure, quality, and interiors.

New front multifunction headlights with LED technology allow easy adjustment and incorporate DRL as a standard (Day Time Running Light). We also include LED fog headlights with cornering lights option.

New interiors

The interior design has been created to highlight the amplitude and luminosity.

We have created an environment that gives the passenger an outstanding feeling of freedom and comfort.

Amplitude

The wide luggage bay redefines the storage capacity in passenger transport, as it is the most spacious in the market.

The SC7 NG boot has been designed to load and unload in a simple and quick manner, to reduce the waiting time and to allow an enjoyable hassle-free trip.

Efficient Driving

We have increased the space in the new driver's area, to allow the maximum comfort and control of the surroundings.

The ergonomics in the driver's area are evident both in the seat and in the access to the control panels and their visibility.

It also comes with extra storage space.

Visibility

The strategic placement of the rearview mirrors secures an enjoyable driving experience and give the driver an optimal view as if it were a compact car.

Coming soon, the mirror-cams option!

Comfort

The Sc7 NG is created to provide a pleasant user experience.

The passenger area is now equipped with a new high-tech design for the air vents and reading lights units, which provide extra accessibility and luminosity.

It allows the passenger an individual control with an enhanced user experience

SC7 NG spacious interior includes side roof lighting and the possibility to place several LED monitors.

The new luggage rack design is now more accessible for maintenance and repairs in the systems embedded in the racks.

The new and exclusive touchscreen facilitates access to all the vehicle controls. Also, it includes a joystick on the left side of the driver's seat which allows to control all the functions in the screen in a safe way, avoiding potential driving distractions.

More Technological

The state-of-the-art technology implemented in the Sc7 NG is a testimony of our commitment to innovation.

The standard Sc7 NG comes with a radio, USB port for audio and video playback, hands-free functionality, digital amplifier, and integrated multifunction screen.

Furthermore, it includes a multiplexed system that facilitates the electrical management of the vehicle, tools for diagnosis of the electrical system where we can visualize not only the inputs and outputs of the electrical units but also the state of the fuses.

More Efficient

The Sc7 NG is designed to be environmentally friendly, as it is designed for the use with the cutting-edge new generation chassis and the implementation of energy-efficient technologies.

The new body comes with aerodynamic improvements that help to reduce the fuel consumption up to 6% , as well as the CO2 emissions.

The exterior design has been made using the most advanced software for CFD calculations (Computational Fluid Dynamics), achieving a better aerodynamic coefficient.

More Profitable

The SC7NG offers a lower fuel consumption, that translates into a significant saving in operative costs.

The new body has been designed to optimize all the components.

All our coaches pass a strict structural verification process that guarantees the highest durability while in use.

Safer

Sunsundegui equips all the vehicles with the latest technology in terms of safety, according to all the applicable EU regulations.

In the SC7 NG there is an improved driver vision thanks to the new design of the windshield.
